

Dear Hiring Manager,

I am excited to submit my application for the Staff Software Engineer position at Pearson. I am a Staff Software Engineer with 15+ years of developing software for startups and established companies. Background in web development with a track record of building, shipping, and scaling products that deliver value. Strong problem solving skills and the ability to effectively communicate with clients and team members.

Utilizing React, TypeScript, Node.js, I have developed dynamic, responsive web applications that cater to diverse user needs. My proficiency is on the front end also using HTML and CSS ensures that the applications I build are not only functional but also visually appealing.

Prioritize performance SEO optimization in every project. By leveraging React and careful performance work, I ensure fast load times and seamless user interactions.

Strong track record of working collaboratively with designers, back-end developers. My communication skills allow me to effectively translate client requirements into technical specifications and deliverables.

Writing clean, maintainable, and scalable code is a cornerstone of my development process. I adhere to best practices in coding standards, version control (Git), and testing to ensure the robustness of the applications I develop.

Enthusiastic about the opportunity to contribute to your project and bring your vision to life. My goal is to build a web application that not only meets your technical requirements but also provides an exceptional user experience. I love developing software and if there is something I don't know, I will study and research.

Thank you for considering my application. I am looking forward to discussing how my skills and experiences align with your needs.

Best regards,

Andrew Bliss
